Disease or Injury
Chronic disease or injury are a result of inequities, behaviors, and genetics.
Smokers are 2-4 times more likely to develop heart disease than non-smokers.

Mortality
Health inequities and health disparities affect how long someone will live.
Life expectancy for smokers is at least 10 years shorter than for nonsmokers.

HEALTH INEQUITIES...are differences in health that are avoidable, unfair, and unjust. They are a result of social, economic, and environmental conditions.

HEALTH BEHAVIORS...are influenced by health inequities. Smoking, poor nutrition, and lack of exercise are all behaviors that may lead to poor health.

In Marin, CA there is a 15-year life expectancy difference in just eight miles.

Hispanic adults are less likely to receive advice from a health provider to quit smoking than non-White Hispanic adults.
